- All Purebred Arabian Stallions and Mares used for breeding must be DNA-typed prior to breeding.
- All Purebred Arabians that were Blood-typed must now be DNA-typed.
- All Purebred Arabian Foals born after 1 August 2002 must be DNA-typed and Parent Verified at Registration. In the case of Purebred Arabian Geldings, hair must be collected and supplied to NZAHS in the DNA-typing Envelope at the time of Registration and will be held in storage in case it is required at a later date. There is no charge for Gelding envelopes issued to be held in storage.
- All Purebred Arabian Foals produced using imported semen must be DNA-typed and Parent Verified at Registration (including Geldings who shall be required to pay a DNA-typing fee in addition to the Registration Fee).
- DNA-typing is not required for Derivative registrations.
- DNA-typing must be completed prior to export for all Purebred & Derivative horses (including Geldings). Contact the Secretary to obtain a DNA envelope and costs.

Collecting Hair for DNA Typing

- Pull mane hair from above the wither (from mid neck region).
- Firmly grasp a tuft of 25-40 hairs as close to the skin as possible and pull evenly and directly away from the neck. The aim is to pull the hairs out by the roots rather than breaking off the hairs. When you look closely at the ends you will be able to see the small roots (especially with a magnifying glass). At least half of the hairs should have roots.
- Avoid contaminating with hair from other horses. Collected hair should be immediately placed in the labelled envelope, sealed (avoid licking) and posted inside another envelope to the NZAHS Office.
